

CORE

Commercial Odor Reduction Equipment

Designed for use where the elimination of high levels of bacteria and odors is required. CORE unit actually accomplishes this by destroying the bacteria or gases causing the odors without filtration. Some examples for application would be dumpsters, lift stations, or exhaust ventilation. CORE is designed for indoor or outdoor installations. CORE unit produces extremely efficient and appropriate levels of UV produced ozone without any detrimental nitric acid production which is the case with many ozone producing generators. The unit is switchable from low, medium or high to enable production of only the necessary level of oxidizing gases to deal with the bacteria and/or odors present.

Dimensions

27.5" Long x 9.5" Wide x 7.25" High

12 lbs.

8' Connector Hose Included

2.25" Mounting Adapter Included

Replacement Unit Filter Included

Power Usage

Low 112 watts, 1.02A

Med 175 watts, 1.50A

High 239 watts, 2.02A

*Available in 120V, 60Hz or 230V, 50Hz (power usage shown for 120V model)

Performance

Low 3.34 gms/hr. ozone

Med 6.67 gms/hr. ozone

High 10.0 gms/hr. ozone

50 CFM all settings
